PUBLISHING PROOF

Audit stability before you publish the edit.

Use this after the edit feels finished but before exporting or posting. The checklist catches unstable color, heavy contrast, noisy shadows, and output mistakes.

01	**Read**	Does the image read small?
02	**Color**	Is the mood stable?
03	**Contrast**	Does strength help direction?
04	**Noise**	Are shadows acceptable?
05	**Export**	Does the output fit the role?

Quick reminder

A final pass should remove habits, not add decoration.

Final check

Publish only after the image survives a quiet read.
