LENS CHOICE

Choose distance before choosing zoom.

Use this when changing lenses or phone zoom levels. The map keeps focal length tied to the job of the image, not to habit.

01	**Wide**	Place and scale
02	**Standard**	Natural attention
03	**Tight**	Reason and detail
04	**Move**	Can distance solve it?
05	**Role**	What does the set need?

Quick reminder

Zoom changes meaning, not only size.

Final check

Move first, then choose how much of the world belongs in the frame.
