LIGHT ORDER

Light should build the frame, not decorate it.

Use this when an image has attractive light but still feels disorganized. The checklist tests whether the light is actually guiding the viewer.

01	**Path**	Where does light lead?
02	**Volume**	What shape becomes visible?
03	**Separation**	What stands apart?
04	**Focus**	What receives priority?
05	**Exit**	Where does the eye leave?

Quick reminder

Light is strongest when it organizes the photograph.

Final check

Atmosphere without order becomes decoration.
