NIGHT PORTRAIT SURVIVAL

Night portraits fail when the face and background fight.

Night portraits need a clear agreement between face, background, highlights, stability, and noise. Use this before the scene disappears.

01	**Ambient**	Find the light that already helps.
02	**Face**	Keep skin readable before mood.
03	**Highlights**	Protect signs, lamps, windows.
04	**Stability**	Hold the frame like it matters.
05	**Noise**	Soften it; do not crush the night.

Quick reminder

Choose the light before the pose.

Final check

Night should feel intentional, not rescued.
