PRESET RESTRAINT

Landscape presets must protect depth.

Use this when a landscape preset looks impressive but starts flattening distance, over-darkening sky, or turning atmosphere into color noise.

01	**Scale**	Does distance still exist?
02	**Sky**	Is it believable?
03	**Ground**	Can the eye enter?
04	**Color**	Is atmosphere clean?
05	**Drama**	Did strength flatten depth?

Quick reminder

Depth is the landscape's structure.

Final check

Drama should not collapse the distance inside the frame.
