SYSTEM OVERVIEW

Review the image before choosing the edit.

Use this as a compact map of the full PhotoMind judgment loop. It keeps selection, diagnosis, editing, sequencing, and publishing in the right order.

01	**Select**	Which file has a core?
02	**Read**	What is the image about?
03	**Diagnose**	What actually needs help?
04	**Edit**	What path supports it?
05	**Publish**	What role should it play?

Quick reminder

Diagnosis makes editing simpler.

Final check

A workflow is useful when it prevents random decisions.
